

Retail Management Solutions

Maximizing Technology

Peace of Mind With Retail Management Solutions —

Business Solutions magazine referred to Retail Management Solutions as the “Prescription for Pharmacy POS” in their July 2002 cover story. With the Star-Lite, Star-Plus, and Star-Link systems, RMS is the leading provider of POS systems for a full range of pharmacy environments, from one-register apothecaries to large 15-register independent pharmacies to small and medium-sized independent chains.

Star-Lite Cash Management System

Designed with the clinic pharmacy and apothecary in mind, the Star-Lite system gives the pharmacy a register with fully integrated accounts receivable; Internet credit and debit card processing; home delivery; and electronic signature capture for HIPAA privacy, third-party logs, safety caps, A/R, and credit cards.

- Dispensary integration feature warns the clerk if other prescriptions are available for the patient and linked family members before final checkout.
 - Patient counseling notes can be taken right at the register and sent back to the pharmacy system.
 - A patient file created in the pharmacy system can now automatically be added to the POS.
- Prescription and item bar-code scanning.
- Automated check endorsement, check face printing, and MICR reading for electronic check conversion.
- Biometrics: log into the system using your fingerprint.
- Cash management feature includes bank deposit reporting to assist with your daily bank deposits.
- Transaction log viewer allows you to review, query, and print your electronic journal. No more journal tapes to store!
- Home delivery module allows you to take orders over the phone and track the order through the delivery process.
- Customizable flat panel customer display allows you to run scrolling advertisements at the register.

Star-Plus Point-of-Sale System

For businesses needing a full-featured POS, the Star-Plus system is designed with that user in mind. Including all of the Star-Lite functionality, Star-Plus adds inventory control, wholesaler interfaces for price and cost updates, purchase order transmission and acknowledgement, label and sign making, customer loyalty, promotional event management, and unparalleled reporting capabilities.

- Export customer and product file to your favorite database, spreadsheet, or word-processing software.
- Use a wireless handheld PDA or laptop to update your system from anywhere in the store.
- Automated on-site backup via CD-RW, plus off-site data storage and recovery — fully encrypted and HIPAA compliant.
- Review your current inventory and sales history at trade shows using a laptop workstation.
- Integrated gift card program.
- Integrated merchandise credit cards for customers who return items without receipts.
- Import product images and print those images on shelf talkers and signs with our Signs & Labels module.
- Print shelf labels to a wireless portable printer attached to your belt.
- Using a Hamacher planogram program through your wholesaler, import the planogram information into the bin location field, and your new shelf labels (with item price) will print in the order the items are displayed on the shelf.

Star-Link Head Office System

If you have more than one store, Star-Link is the solution for you. Tying both Star-Lite and Star-Plus systems together, Star-Link gives your business centralized reporting, cash management, accounts receivable, product and price updates by zone or region, promotional management, store transfer, and much more.

- Computer-Assisted Store Transfer monitors the sales volume and inventory levels of every item and automatically recommends transfers between stores!
- Uses SQL database, allowing IT departments easy database access.

Network Security Services

Secure your Internet connection and keep hackers out with our managed services. Not only will you become HIPAA compliant, but you will also protect your own company's confidential information while securing the functionality of your network. Additionally, your valuable data can be protected as it travels outside your business. Information transmitted via the Internet is susceptible to hackers. With virtual private network (VPN) tunnels running from your business to third parties or to your home, the data is encrypted and virtually impossible to intercept.

- HIPAA-compliant firewall protection
- Virus protection
- Virtual private networking
- Spam blocking
- Spyware blocking
